Search Tips

Ways of access

− Find a Table of Contents for each volume in the menu located in the picture-logo on the left.
− Open BHL Go To in order to search for a specific saint’s vita by its BHL-Number (Bibliotheca Hagiographia Latina).

Search Interface / Search Options

− **Keyword:** Search the complete text corpus for your keyword or keyword combinations.
  - In order to search for Greek keywords click the browse button and enter your keyword in Latin letters into the search box. Select the appropr. Greek keyword from the list.
− **Title:** Search for your keywords only in the title of a text.
− **Author:** Enter the name of the author of the text you are looking for.
− **Volume:** Open the browse list (click „Browse“) and select one or more volumes of the Patrologia Latina you want to limit your search to.
− **Search in:** Limit your search to the pure source text only, editorial texts or both.
− **Limit to:** Limit your search to texts written by only medieval or by only later authors.
− **Combine Search fields:** Enter keywords in different search boxes or select from the limitor-drop-down-fields. Patrologia Latina will do an AND-search: a text has to match all selected criteria.
− **Browse:** Find a „browse-button“ next to each search box. It opens an alphabetical list of all words contained for this search field.

Use the browse lists in order to:

- look for the correct spelling and variants (endings) of your keyword. Enter the first letters of your keyword;
- search for keywords containing special characters like abbreviations, e.g.: in "aediculā“. Open the browse list and enter „aedicula“, select “aediculā” and click OK to enter it into the search box in the main search interface;
- **Tip:** Browse lists select automatically the first word matching your entry. Make sure, you decheck the selection in case you want to select a word further down in the list.
- **Note:** In case you selected some words and want to scroll down to the next page of the list, click on OK first to enter your selection into the search interface, before you go back and scroll down the list.

Search Tips:

- All search boxes are case **insensitive**. All operators (see below) are case **insensitive**.

- To search on typographical variants, different endings and casus or word forms you can use:
  - the **truncation** symbol * at the end of a wordstem: serpen* finds serpens, serpentsis, serpentaneus, etc.;
  - the „browse list“: click on „browse“ and open an alphabetical list for all keywords of a search field. Select all variants you can find;
  - the **wildcard** symbol ? to replace zero or one character at the beginning, the end or within a word:
    - ?oseph???? finds Josephus, Ioseph, Joseph, Iosephum, Josephorum; Iosepho, etc.
    - loc?s finds locus und locvs, etc.
    - Ludmi??a finds Ludmila, Ludmilla.

- To search on:
  - **phrases**: Just enter the phrase: ego sum via. Note: You can also truncate within a phrase.
  - **more than 1 unrelated keyword**: Use Boolean Operators AND, OR, NOT: pater AND filius finds texts containing both words somewhere in the text, pater NOT filius finds all texts containing pater but missing filius. Pater OR filius finds texts containing pater, but not filius – filius, but not pater – pater as well as filius.
  - **keywords related** to each other in a sentence or a motif use Proximity Operators NEAR, FBY (Followed by). By default both proximity operators find your keywords **within 10 words** of each other. To change this default, use a full stop followed by a number of your choice: mort NEAR.5 martyr* finds texts in which mort and martyr* appear within 5 words from each other.
    - Tip: Search for a quotation you are not sure about the exact phrasing by using proximity operators. Repeate the search in case you get 0 results by replacing one of your used keywords to double check if you can find the quotation (this is due to technical issues, that guarantee an exact display of characters and text).
  - **keywords combined by different operators**: Prioritse which keyword should be connected by which operator using brackets: (crucifi* OR crux)* NOT (?esu* OR christ*).
    - Note: Proximity Operators have to be used within the brackets: (via NEAR lux) OR (vita NEAR lux), not: (via OR vita) NEAR lux.
Where To Find Help

In North America:

- **Technical Support**
  Phone: 800-889-3358
